## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 12-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Richard (US 5,772,908) in view of JP 2003181625.

Richard discloses a refractory plate (col. 2, lines 18-24) used for controlling the flow of molten metal. The plate is brought into the plant or workshop to inspect for wear and replacement is necessary if refractory plate is damaged.

Application/Control Number: 10/565,480

Art Unit: 1725

Richard lacks the disclosure of measuring the wear and then determining if the plate needs to be replaced

However, JP '625 discloses a plate damage measuring which can properly and easily measure an eroding state of a peripheral part of a through hole of a plate and can properly judge a damage degree of the plate.

Therefore, it would have been obvious to an ordinary skill in the art at the time applicant's invention was made to have wear detection instruments as taught by JP '625, in Richard, in order to avoid bringing the plate to the shop.

Furthermore, it would have been obvious to an ordinary skill in the art to use the instrument of JP '625 and then determine if the plate needs replacing. The instrument is usually measured by the difference of throttling rate, pressure, diameter of pouring orifice, and velocity of the molten metal. Also, the plates can be replaced upon the technician's recommendation, for example, decision of plate's history, incidents occurred during casting to the plate, and alterations to the plate.

## Response to Arguments

4. Applicant's arguments filed 4/16/07 have been fully considered but they are not persuasive.

Applicant mainly argues that both Richard and JP '625 fail to teach the determination of parameters conventionally measured during the casting. Based on broadest interpretation to the claimed invention, the parameters conventionally measured are wear, fatigue, and erosions. Both Richard and JP '625 disclose the method of

Application/Control Number: 10/565,480

Art Unit: 1725

detecting the wear on the slide gate plate. Therefore, the claimed invention is not defined over the combinations of Richard and JP '625.

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Len Tran whose telephone number is (571) 272-1184.

The examiner can normally be reached on M-F, 8:30 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jonathan Johnson can be reached on 571-272-1177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
